

UNDER PRESSURE VALVE INSTALLATION

Team's patented InsertValve™ delivers value, reliability and performance second to none. Unique valve characteristics include:

Standard MJ valve connections

- The existing old pipe is not the valve seat for the brand new valve
- Allows for future removal/replacement of pipe

Installs and repairs under pressure

- All moving parts can be repaired or replaced without system interruption

Water conservation

- No water wasted as in a "shutdown"

Team offers InsertValves ready for line cut-in by your technicians or ours. Either way, you get a valve that meets your every requirement. Get your InsertValves at +1-800-662-8326 or visit insertvalve.teaminc.com to view installation animation.
